

CITY OF CADILLAC – IPP - PFAS INITIATIVE SCREENING EVALUATION

Industrial User Survey Questions

for Per- and Polyfluoroalkyl Substances (PFAS) Identification

Please review the list of potential PFAS sources below. If you currently or have historically discharged wastewater into the sanitary sewers from any of the manufacturing operations or activities listed, please complete the corresponding section identified and return it to dlangworthy@cadillac-mi.us within 10 business days.

- Electroplaters of metals or plastics, metal finishers, circuit board manufacturers – *Complete Section 1*
- Paper and packaging manufacturers – *Complete Section 2*
- Leather, textile, fabric and/or carpet treaters, leather tanneries – *Complete Section 3*
- Manufacturers of parts with polytetrafluoroethylene (PTFE) coatings such as bearings, wires, etc. – *Complete Section 4*
- Landfills with leachate discharges – *Complete Section 5*
- Centralized Waste Treaters – *Complete Section 6*
- Industry sites with soil or groundwater contamination including those where aqueous film forming foam (AFFF) was used (e.g. fires, firefighter training, equipment testing) – *Complete Section 7*
- Industries using PFAS in other processes or operations – *Complete Section 8*

I am the designated representative of the listed company. These questions are answered to the best of my knowledge:

Company Wexford County Landfill, LLC

Name Vicki Garon

Title Landfill Engineer

Signature

Date May 21, 2018

Section 5 – Landfills that Discharge Leachate

Most landfill leachate will have some PFAS due to disposal of consumer products, but we are currently interested in landfills that have received PFAS laden industrial wastes such as sludge from metal finishers, leather tanneries and/or similar sources.

i. Is your landfill still accepting wastes for disposal? If not, when was it closed?

- We are currently accepting waste.

ii. Do you currently or have you in the past accepted industrial wastes? Approximately what percentage of your wastes would be considered industrial?

- We took ownership of the facility in fall 2011 and can only provide information since we had control of the facility. Prior to our ownership, the County of Wexford had control of the facility and information regarding waste accepted would need to be requested from them.
- We accept industrial waste which is defined as solid waste which is generated by manufacturing or industrial processed or originates from an industrial site.
- The percentage of industrial waste based on overall waste acceptance ranges between 18 and 30 percent of our incoming waste.

iii. Were wastes from any of the following manufacturing operations accepted: Sludge from electroplaters/metal finishers, waste from coated/treated paper manufacturers, treated leather/fabric wastes, tannery wastes, wastes from PFAS chemical manufacturers, wastes from manufacturers using non-stick coatings, municipal biosolids known to be impacted by PFAS, any other known sources of PFAS? Please provide types and estimated amounts or percentage wastes received.

- We keep a record of the generator name associated with the waste transported by us to the landfill, but not necessarily that which is transported by other hauling companies. We do not record these shipments by SIC codes or other means that would allow us to provide you information on the percentages as you have requested.

iv. Have you analyzed your leachate for PFAS? If so, please provide the results.

- We have not analyzed our leachate for PFAs.
