Mr. Valdas Adamkus
Regional Administrator
U.S. Environmental Protection Agency
230 South Dearborn Street
Chicago, Illinois 60604

Dear Mr. Adamkus:

The Michigan Department of Natural Resources (MDNR) concurs with the remedial technology selected for the Northernair Plating Company Superfund site in Cadillac, Michigan, as outlined in the Record of Decision (ROD) received September 27, 1989. However, we do not concur with the target cleanup level for Trichloroethylene (TCE). The ROD states that the target cleanup level for TCE is the Maximum Contaminant Level (MCL), which is 5 parts per billion (5 ppb). MDNR does not support the use of MCL's as target cleanup levels; the Department supports a target cleanup level of one part per billion (1 ppb).

In concurring with the remedial technology, we also do not concur in the rationale used to support the selected remedy. Specifically, Act 245, the Michigan Water Resources Act and the Part 22 Groundwater Discharge regulations implementing the Act were not considered as Applicable, or Relevant and Appropriate Requirements.

We also believe that the description of the "Site" needs to be expanded to reflect additional known sources of contamination which are not included within the ROD but have been addressed in the Remedial Investigation/Feasibility Study documents upon which the ROD is based.

If you have questions regarding programmatic or technical aspects of this site, please contact Ms. Diane Roycraft, MDNR Project Manager, at 616-775-9728.

Sincerely,

for
Delbert Reesor
Deputy Director
