RE: Fall Biosolids Application

Cindy,

Per our conversation I'm writing to inform you we will be incorporating biosolids for our fall application due to equipment malfunction of our contracted haulers. I have attached a letter from the haulers explaining their situation.

As you stated for our fall haul we intend to do the following:

- 0-6% slopes will warrant 1 pass application. If there is any pooling or surface water the Operator shall reduce the application rate and work in the pooling biosolids.
- 6-12% slopes will warrant 1 pass application with an additional dry pass to work in the biosolids.

If you need anything else from me please contact me at 231-775-2841 or 231-510-0238.

Thanks,
