Subject: Cadillac WWTP - FY19 Biosolids Land Application information - problems

Hi Doug – This is in regards to the **FY19** biosolids annual report, not the FY20 report that you just did and I just completed. I am finally getting to complete the FY19 one.

As I'm looking at the metals results submitted, I see the Sept. 2018 sample exceeded Table 3 for Arsenic (the limit is 41 mg/kg). The sample was tested by Pace Analytical.

The initial result showed As with a result of 61 mg/kg (pg. 5) and then the lab retested it (pg. 6) and that result was 45.9 **J** (qualifier). The **J** is defined as: ***Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.***

In either case, 45.9 and 61 both are exceeding the Table 3 limit of 41 mg/kg.

When this happens, it means the facility must notify our department prior to the land application. *Sample was collected in Sept., land application didn't occur until Oct.*

It also means when submitting a biosolids annual report, the certification needs to reflect if biosolids exceeded Table 3 when land applied.

- The report stated the plant did not land apply biosolids exceeding Table 3.
 - That is incorrect.
- I did note that in this report, instead of certifying as a Class A facility, the plant certified as a Class B facility.
 - This would be correct since Table 3 was exceeded.
 - A plant cannot claim Class A, if Table 3 is exceeded.

Please call me at your earliest convenience so we can discuss how to correct these problems.

It may mean,

1. A violation for non-notification of land applying CPLR.
2. A revision to the FY19 report (stating correct certification of land applying biosolids that exceeded Table 3).
3. Providing notification of CPLR on the fields that were land applied to in Oct. 2018,
 - a. FY19 documentation states six (6) fields were used in that time frame.
4. Sampling will be required at a minimum of two times per year, which the plant already does.
5. Tracking of the cumulative loading rate for As on those fields for their lifetime of use will be required.

I'm currently working 7:30 am to 4 pm every day of the week, so call when you can.

Thanks

Cindy
