Aaron,

We had a higher-than-normal cyanide result for April's sample. We resampled and still got a high result. We took more plant samples and 6 upstream samples today trying to narrow down the source. We will try to locate the issue and address the problem accordingly. I just wanted to give you a heads up since it will be a permit exceedance. Please let me know if you have any questions.

Aaron,

Our additional cyanide sampling did not find a smoking gun. All of the additional samples were below permit limit. Next time we take a monthly sample, we are also going to take a couple upgradient's and send duplicates to another lab. I am concerned that April's cyanide exceedance was a lab error, but we will keep digging. I will keep you informed of any issues we find. Please let me know if you have any questions.

**Subject:** Cyanide Violation on 6/10/2026

Erik,

CCI is in violation for Cyanide. The wastewater treatment plant has been experiencing cyanide issues for the last couple of months. We have been sampling in the collection system trying to locate the source. We have pinpointed the source to be CCI. Your sample results were 670 ug/L and the limit is 4 ug/L. This is causing the wastewater treatment plant to violate the state NPDES permit. We have notified EGLE of the violation. CCI needs to address this issue immediately. We will be continuing to monitor this situation closely. Please respond to this email with confirmation of receipt and a plan to address the issue asap.
