Hi Jacob,

I wanted to give you a heads up that we had a violation on the monthly copper concentration average for December 2023. We were at 13.7 ug/L and the limit is 11 ug/L. We are monitoring this closely and have made processes changes to help remove more copper out of the effluent. I have made this note on the DMR in MiEnviro as well. Please let me know if you have any questions. Thank you.

Patrick Miller
