VIA EMAIL

Jeffrey Dietlin, Director
City of Cadillac
Utilities Department
200 North Lake Street
Cadillac, Michigan 49601

Dear Jeffrey Dietlin:

SUBJECT: Categorical Industrial User (CIU) Assessment Request
Industrial Pretreatment Program
National Pollutant Discharge Elimination System (NPDES)
Permit No. MI0020057
Designated Name: Cadillac WWTP

On December 5, 2022, staff of the Department of Environment, Great Lakes, and Energy (EGLE), Water Resources Division (WRD), conducted a CIU Assessment for Cadillac Casting, Inc. (CCI). This assessment was requested by WRD, Gaylord District Office staff following a Pretreatment Compliance Inspection which identified CCI as a likely CIU without categorical standards included in the Industrial User permit. Per that request, the WRD has completed their evaluation based on information provided by Erik Olson of CCI via an online meeting on November 22, 2022, via email on December 5, 2022, January 27, 2023, and February 24, 2023, and consultation with the *Compliance Sector Notebook Profile of the Metal Casting Industry*.

The information provided to EGLE states that CCI wastewater is associated with ductile iron casting operations, including melting furnace wet scrubbers, dust collection wet scrubbers, and overflow from the slag quench process. Wastewater from the dust collection scrubbers is discharged from a filter press treatment process. Wastewater from the melting furnace scrubbers and overflow from the slag quench process is discharged via the wastewater treatment process consisting of polymer treatment, a lamella clarifier, filter press, and pH adjustment. Wastewater from these treatment processes is discharged through floor drains and appears to be mixed with laboratory wastewater, "domestic" sanitary wastewater, and non-contact cooling water, thereafter, being discharged to the publicly owned sanitary sewer.

Based on the information provided, current operations at CCI would be subject to 40 CFR Part 464, Metal Molding and Casting Point Source Category, Subpart C – Ferrous Casting Subcategory for new sources. The dust collection scrubber falls under Part 464.36(c)(1), the melting furnace scrubber under Part 464.36(f)(1), and the slag quench under Part 464. 464.36(h)(1). Part 464.31(a) – Specialized Definitions for Total

Toxic Organics has additional pollutants required for the process used unless the alternate oil and grease standard is applied. The dust collection scrubber additional pollutants are listed in Part 464.31(a)(2). The melt furnace scrubber additional pollutants are listed in Part 464.31(a)(4). And the slag quench additional pollutants are listed in Part 464.31(a)(6).

If you have any questions or comments regarding this determination, please contact Terri Shattuck at 269-312-0548; ShattuckT@michigan.gov; or EGLE, WRD, Kalamazoo District Office, 7953 Adobe Road, Kalamazoo, Michigan 49009-5025.

Sincerely,

Claire Lowe
