Subject: IPP Annual Report

Jeff,

As discussed, some of the information in the IPP annual report appears incorrect.

- The oversight table lists the following facilities as having pollutants in SNC, but answers “no” to the question is the facility in SNC with the pretreatment standards. The answer should be “yes” if these facilities had any pollutants listed. AAR 6th Street, Arvco, Fiamm, Hutchinson, Michigan Rubber.
- On the oversight table the following facilities are listed as in SNC with the reporting requirements (this means more than 30 days late on a report required by the permit/program, such as self-monitoring reports, certification statements, baseline monitoring reports etc.) Rec Boat Trailer Division, Michigan Rubber, Hutchinson, Fiamm, Cadillac Casting, Arvco, AAR 6th Street. Is this correct? This seems like an unusually high number of late reports reaching the point of SNC.
- On the monitoring data table there is no data listed in the influent column for the following pollutants with current local limits: 1,2-dichlorobenzidine, chloroform, lindane, PCBs, Phenol, Styrene, BTEX parameters. Results are given for the effluent and biosolids, but influent is also required for all locally limited parameters under the NPDES permit requirements. Please add these results to the report if you have them.

Please correct and resubmit your report. If any of the above information isn't available, please let me know.

Thank you,

Claire Lowe
