EGLE / MPART — Regulated Wastewater, Rule 57 Water Quality Values, and the IPP PFAS Initiative

Source: Michigan Dept. of Environment, Great Lakes, and Energy (EGLE), MPART website

URL: <https://www.michigan.gov/pfasresponse/investigations/wastewater>

Retrieved: July 13, 2026 · Excerpts verbatim from page text

Relevance: establishes (1) the regulatory framework under which the Cadillac WWTP's NPDES permit regulates PFAS, (2) Michigan's Rule 57 surface-water PFAS values used as the compliance benchmark, and (3) the February 2018 IPP PFAS Initiative under which the Cadillac WWTP's 2018 PFAS sampling took place.

Key excerpts

"Anyone discharging wastewater into waters of the state is required by law to obtain a National Pollutant Discharge Elimination System (NPDES) permit... The NPDES and Groundwater programs regulate municipalities and industries that discharge directly into lakes, rivers, streams, and groundwater by limiting pollutants, including some per- and polyfluoroalkyl substances (PFAS)..."

"Michigan has water quality values (WQV or Michigan Rule 57 values) for discharges to surface waters for five PFAS... PFOS has led to fish consumption advisories for some Michigan rivers because it bioaccumulates so readily in fish..."

"Major sources of PFAS come from industries that have used PFAS-containing chemicals (such as chrome platers and paper manufacturers) and industrial users that may have accepted wastes from industries that used PFAS-containing chemicals in their processes and/or products (such as landfills and centralized waste treaters)."

"Unfortunately, conventional WWTP treatment does not effectively remove PFAS if it is discharged into the sewer system. Instead, PFAS may be passed through treatment to lakes, rivers, streams, and groundwater... WWTPs are therefore a critical control point in reducing the discharge of PFAS into the environment. EGLE launched the IPP PFAS Initiative in February 2018."

Rule 57 water quality values — surface water not used as a drinking water source (applies to Clam River discharge)

PFAS	WQV (ppt)	Established
PFOS	12	May 2014
PFOA	170	July 2022
PFBS	670,000	July 2022
PFHxS	210	October 2023
PFNA	30	October 2023

Note: the 710 ppt combined PFOA+PFOS measured in 2018 leachate delivered to the Cadillac WWTP (Exhibit E) is roughly 59x the PFOS WQV and 3.5x the later-established PFOA WQV, illustrating why

EGLE required source elimination.
