Retrieved: July 13, 2026 · Article body text captured verbatim (site navigation omitted)

Relevance: documents the official IPP PFAS Initiative findings — the Wexford County Landfill identified as the sole industrial PFOS source to the Cadillac WWTP, EGLE's March 4, 2019 compliance letter, cessation of leachate acceptance in summer 2019, and the current NPDES permit's 3x/year PFAS effluent sampling requirement.

Key passages (verbatim)

"Both Cadillac WWTP and Haring Township WWTP participated in the IPP PFAS Initiative. Under the IPP PFAS Initiative, both WWTPs evaluated their industrial facilities and collection systems to identify potential sources of PFOS to the WWTP."

"The City of Cadillac identified one industrial source of PFOS to the WWTP - the Wexford County landfill."

"In a March 4, 2019, letter EGLE required the city to sample the discharge from the WWTP on a semi-annual basis and to work with the landfill to reduce and/or eliminate PFOS from the discharge of landfill."

"The city ceased accepting the discharge from the landfill in the summer of 2019. Upon re-issuance of the city's NPDES permit on Nov. 29, 2023, EGLE determined the city completed the requirements of the IPP PFAS Initiative."

"NPDES permit requires Cadillac WWTP and Haring Township WWTP to sample final effluent prior to discharging to the Clam River for PFAS at a frequency of three times per year (January, May and September)."

"Both WWTPs are required to submit the results of the PFAS sampling to EGLE and are accessible to the public via the MiEnviro Portal."

"The discharge from both WWTPs has been in compliance with EGLE's Rule 57 Water Quality Values for PFOS, PFOA, PFBS, PFNA and PFHxS since they began monitoring for PFAS in 2019."

"According to the report, the City of Cadillac's drinking water has tested non-detect for all PFAS since it was first tested in 2018 and through the most recent sample in 2024. The city is on annual compliance monitoring for PFAS."
