Subject: IS WATER DRAWN OUT THE SAME AS CHEMICALS INJECTED IN ??
Date: Sunday, April 15, 2018 8:19:53 PM

JUST WHERE DO YOU STAND?? WE NEED ALL THE HELP WE CAN GET!!!!

I would like to ask the Director of the MDEQ **Heidi Grether** (Phone: 517-284-6700 or 800-662-9278) (GertherH@michigan.gov).

If her stance on the **Nestles Water Withdrawal** “We are hopeful that whether residents agree with the permitting decision or not, they will acknowledge and respect the work that MDEQ staff did to thoroughly and conscientiously apply the law in reviewing the permit”. THE MDEQ acknowledged that most of the PUBLIC comments it received about the application were negative. “But most of them related to issues of public policy WHICH ARE NOT, AND SHOULD NOT BE, PART OF AN ADMINISTRATIVE PERMIT DECISION. We cannot base our decisions on PUBLIC OPINION because our department is required to follow the rule of law when making determinations.” Which is basically saying that Public Opinion has no place in the permitting process. Will also apply to the DEEP INJECTION WELL PERMIT REQUEST made by “American Waste” in Wexford County under the name of “Wexford Water Technologies LLC”. If she does Ms Grether will ignore her sworn responsibility to the protection of the public health and welfare, along with the protection of the quality of the environment. If her stance remains the same when it comes to a “Deep Injection Well” being drilled and built at a landfill that has already once contaminated the drinking water of those who live around that very landfill then she and the MDEQ will openly ignore their duty to the citizens of Michigan. I believe that taking water from a Michigan aquifer and selling it is one thing. But, that taking liquids from a landfill (leachate), and perhaps other dangerous liquids produced by other processes. Then injecting those various liquids underground in a cost savings and profit making venture is not in the best interest of Michigan. If it is then let's build a “Deep Injection Well” in her neighborhood and let her grandchildren and great grandchildren drink that water for the next 60 years. No right thinking person would want this to happen where they live but Heidi Grether and the MDEQ along with the EPA can through, bureaucratic action, force those who live in Cedar Creek Township to do it, so a Waste Hauling Company can make a few

more dollars in profit. Just Where do you stand on this? Can we the people stop the drilling and construction of a unnecessary “Deep Injection Well” in Cedar Creek Township? Or does Public Opinion and Desire really have no meaning here in Michigan. PLEASE STAND UP AND LET THE POLITICIANS AND BUREAUCRATS KNOW THING LIKE THIS MUST STOP.

Yes, a big part of the solution is getting our politicians to change the laws that these organizations work under.

We do NOT want to dissolve the EPA and DEQ they need to have laws written for the PEOPLES benefit and resources to enforce them. We know that will not happen as long as the big corporations can "fund" the politicians---now we are back to election reform. With the current political climate I think we are screwed.

Comment regarding Request for
Injection well by
Wexford Water Technologies LLC
Wexford county / cedar creek township
Manton Michigan. 3.24.18

MDEQ,

I'm writing to implore
a deny decision.

Cedar Creek residents have a
history of contaminated water
due to contamination from the
landfill.

This travesty resulted in residents
forced to have water wells capped
and abandoned.

The solution to the travesty was
to develop a community water supply.
Even though it's reported no possible
way to contaminate the community
water well, the potential and fear
among the residents is very great.

Please consider denying Wexford
Water Technologies LLC request for
Injection well.

Thank you.

Sincerely,

Jean Schmitter

Attachments: [wexford landfill injection well.pdf](#)

EPA Public Hearing on Draft Injection Well Permit
Comment -March 21,2018

The Draft permit for Wexford Water Technology LLC to dispose of Nonhazardous liquid waste from the Wexford County Landfill.

Based on the Draft Permit it is questionable if the proposed leachate to be injected will be tested enough to adequately determine if the leachate is in fact non-hazardous on a continuing basis. Since the truck loads of waste that are dumped at Wexford County Landfill are not inspected to establish what the true content of the waste stream is on a daily basis, how then can Wexford Water Technology guarantee that the leachate is nonhazardous. We do not know what is dumped there and we can be pretty sure that many inappropriate substances do end up there. The MDEQ does not regulate household hazardous waste disposal and Wexford County has not offered a program for that purpose for many years to residents. It is reasonable to assume that many pesticides, household chemicals from cleaners, paint, paint thinners, weed killers and other hazardous materials have ended up in the landfill waste stream.

The draft permit fails to provide assurances of the Nonhazardous nature of the leachate in the required monitoring and sampling as written.

1. Monitoring and sampling-as stated in the draft permit to be carried out at "reasonable times" is vague, offering no definitive terms of frequency for sampling of injection materials and is inadequate for " assuring permit compliance" as it allows an "average"of values over time.
2. Self-sampling and monitoring - the permit should specifically set sampling and monitoring amounts and frequency to be executed by independent ,approved ,qualified water chemistry facilities and reported directly to the MDEQ to verify that it is indeed injecting nonhazardous liquid that could affect water resources.

3. Cumulative Effects- The proposed injection well at Wexford County Landfill could further negatively impact the surrounding community, already severely damaged by a toxic and hazardous plume of contamination that originated from the same source. The permit has not required an Environmental Impact evaluation to determine what the cumulative effect of the injection well process might be in conjunction with the already existing plume. Without this important study and assessment this deep well injection permit should be denied .
4. The draft permit states that “injection of any hazardous wasteis prohibited” but Part I, B. Permit Actions- says the EPA “may... upon request from the permittee, modify.. this permit”, including “minor modifications for cause.” This opens up the question as to what can be requested by American Waste/Wexford Water Technologies and if it could include the import of injection wastes from outside the local area that could include hazardous wastes in the future and that could impact negatively on our local water. The vagueness of this clause is unacceptable.
5. The leachate treatment already taking place at the sewage treatment plant seems to be working. Cleaning the leachate before it goes back into the environment is the better solution.

I am grateful for the opportunity to comment on this important permitting process that could effect the health ,water resources and property values of the Wexford County community. I respectfully request that you deny this permit.

Subject: RE: Wexford Water Technologies, LLC Injection Well – Wexford County, Michigan
Date: Thursday, March 22, 2018 8:12:09 PM

To whom it may concern:

We attended the Public Meeting/Hearing on 3/21/2018 where the EPA and the Michigan DEQ were in attendance to explain the PROPOSED injection well and answer questions from the residents in attendance.

I have the following additional questions:

1. Who is the property owner? is it Wexford Water Technologies, LLC or American Waste. If I am putting a well on my property, I am the one who pulls the permit. Why doesn't American Waste have to pull the permit?
2. Why at this time is the sample taken in 2015 not retaken to represent the current leachate from the Landfill? It appears the EPA and DEQ have not requested onsite a new sample, I feel this is negligent

I am against such a well and ask that you deny the permit for the following reasons:

1. The monitoring is to be done on a daily basis by American Waste on site which I do not trust to comply fully to the regulations. As stated at the meeting "having the fox watch the hen house"
2. I believe the future use of the well will be expanded and create an additional environmental hazard to the entire area around the landfill and possibly lakes, rivers and streams in the area.. Which has already happened with the past experience.
3. I am unwilling to believe that this non-hazardous waste will remain non-hazardous in the future and fear for the entire county, and state in regard to all the fresh water in the area, including water wells of the residents.
4. There are better options to dispose of this waste also stated at the meeting by various legitimate sources, some ongoing and some new technologies also stated at this meeting.

Please consider the ramifications to the residents, the county and the state and deny the approval of this permit.

Respectively,

Roger & Dianne Newman

RE: Wexford Water Technologies LLC Injection Well Permit Manton, MI

Wexford Water Technologies LLC does not own the landfill, therefore, should not be given the permit.

We know that deep well injection remains one of the least expensive waste disposal methods and American Waste desires this. If industry is going to use this method, they must be willing to bear the cost of possible failure. We believe that this WWT Limited Liability Corporation was established in July of 2015 by American Waste, current owners of the landfill, for the express purpose of limiting exposure in case of a failure and large damages. If they are confident in being able to utilize this injection well, let them put it in their name! My understanding of Limited Liability, taken from different articles, is "where a person's financial liability is limited to a fixed sum, most commonly the value of a person's investment in a company or partnership. If a company with limited liability is sued, the claimants are suing the company, not its owners or investors. A shareholder in a limited company is not personally liable for the debts of the company other than for the amount already invested in the company and for any unpaid amount on the shares in the company, if any."

The only financial assurance mechanism that I see in the EPA permit is to properly plug and abandon the well to the tune of a \$33,000 bond. What about other Financial Responsibilities. What are their assets? Where does the money come from to clean up any spill? What if there is a catastrophic issue? Who will reimburse the citizens of the community for damages? No where in the draft of the agreement and responsibilities do I see a financial analysis of the soundness of this company. No where in the application do I see who owns them. I know that their attorney will state that they set it up this way for tax purposes and there may be additional value in this, but American Waste should not be let off the hook for any damages that may occur because of limited liability.

The EPA states: "EPA's review of the permit application for this well concluded it would have no environmental impact." You cannot be sure of this. Whatever theories and computer modeling you use cannot guarantee us that no-migration or movement of liquids underground can be predicted. It is no more than a form of waste storage that will not be treated to diminish the toxic affect if it somehow breaches back into the upper environment. Further, there is entirely too much self-monitoring. Mistakes can be made, intentional mis-leading and cover ups can occur. My understanding is that most errors of releases to the environment at deep well injection sites are likely the result of human error and mechanical failures of loss of well system integrity. I believe that there is a "fudge factor" whereby reports, numbers and other components can be manipulated to allow leeway for error. For the community, it could be disastrous. PLEASE, DO NOT APPROVE!

Subject: MI-165-11-0002 - Public meeting/hearing 3-21-18
Date: Thursday, March 22, 2018 10:03:28 AM

Andrew/Susanne:

My husband and I attended the meeting/hearing 3-21-18 and it was all too reminiscent of the fight we had with the landfill when our 22 Road property was contaminated. I assure you these were not happy times.

So many of my neighbors who spoke last night, did a lot of planning and research and brought up information I was not even aware of. I passed on commenting last night, so that I could consume that information and emotions presented at the meeting.

I am not a professional on geology or injection wells, but I am a human person that can be affected by the outcome of the purposed well.

We fought a hard fight last time for a lot of years. All the while concerned about the water we already ingested. This still haunts us not knowing what consequence it may bring in the future.

I am pleading with you to consider our lives and health. We all matter. Sometimes it is not always about the money!!

RE: Permit Application to drill and operate a non-hazardous waste disposal well know as Wexford Water Technologies Well No. 1 (WWT 1) Both DEQ-OQMD and the USEPA.

To Whom it May Concern,

Upon reviewing the above Notice of Public Hearing of the Zoning Board of Appeals, I would like to express my view with the above case's requests. Haggard's Plumbing & Heating is not at all opposed to the changes of the property and/or the request to the Zoning Board. If a property owner is fortunate enough to have the ability and the resources in this time of economical struggles to either build and/or improve their existing property, we would like to see their request granted. It would prove positive for the local, county, state and country to do all we can to improve and promote growth in any way possible.

Sincerely,

JOHN HAGGARD
