Cindy,

I believe the app rate was 10,000 gal/acre. The dry tonnage for that piece would be about 1.13 DT/Acre. I don't have exact numbers yet because I haven't gotten the agronomic rates back from the haulers. I have a good idea because it was the first field we applied to. As far as the nitrogen rate and yield I'm unsure of those at this time.

Doug

Hi Doug – Could you email me a copy of the latest soils test for the site of RJ02, the site I inspected on May 8th.

Also, a couple other questions for that particular field:

1. What was the Rec. N Rate (lb/ac)?
2. What was the Yield Goal (/ac)?
3. What was the Application Rate (Gal/Acre)?
4. What was the Dry Tons/Acre?

These are the questions I have from the site inspection form.

I have to go over the WWTP inspection form yet. I should be able to do that next week.

Cindy

SOIL NUTRIENT LEVELS			Below Optimum	Optimum	Above Optimum
¹ Soil pH	6.8	Lime Index			
² Phosphorus (P)	70	ppm	■■■■■■■■■■■	■■■■■■■■■■■	■■■■■■■■■■■
³ Potassium (K)	239	ppm	■■■■■■■■■■■	■■■■■■■■■■■	■■■■■■■■■■■
³ Magnesium (Mg)	85	ppm	■■■■■■■■■■■	■■■■■■■■■■■	

RECOMMENDATIONS:

Tillage Depth: 9 inches

% Stand:

Use a starter fertilizer high in nitrogen (30-40 lb N/A) when planting into heavy residue.

For questions about interpreting your soil results go to the following website: <http://fieldcrop.msu.edu/uploads/files/FieldCropsPointofContactMap.pdf> and contact the MSUE agent in your area.

Ray Jackson Farm

Test Methods: 1- 1:1 soil:water pH, 2- Bray P1 Extractant, 3- 1N Ammonium Acetate Extractant
