

All permitted Industrial Users will be given (via email) notice of intent to survey regarding PFAS identification.

Based on response to notice of intent to survey and/or POTW knowledge of Industrial User location and history, permit holders will be identified (or eliminated) as potential sources.

Permit holders identified as potential sources will be given (via email with delivery/read receipt) Industrial User Survey as developed by DEQ-WRD. Response to Industrial User Survey required within 10 business days.

Within 10 business days following receipt of the completed (answered) Industrial User Surveys, permit holders identified as PFAS probable sources will be notified of the City's intent to sample their location for PFAS.

Within 3 months of notification, sampling will be conducted by City of Cadillac, IPP Chief Operator. The most critical probable sources will receive highest priority for sample scheduling.

Sampling will occur at monitoring location(s) as designated in the current IPP permit.

Samples will be collected according to DEQ-WRD PFAS sampling guidance and standard operating procedures. *(documents not yet released)*

Samples will be properly delivered to the approved analytical laboratory (via common carrier) within timeframe required by the laboratory.

All sampling/analysis costs incurred will be invoiced to the permit holder.

Upon receipt of analytical results (from POTW collected samples and/or any supplied directly by permit holder), identify significant sources of PFAS.

If any confirmed significant sources exceed applicable water quality standards, samples will be collected from POTW effluent according to DEQ-WRD PFAS sampling guidance and standard operating procedures.

If POTW effluent analytical results exceed applicable water quality standards, DEQ-WRD must be notified within 10 days.

Permit holders who did not respond within required timeframe were "reminded" via phone call or hand-delivered copy of the original Industrial User Survey. They were given an additional 4 business days to respond.

Permit holders identified as "NOT" PFAS probable sources will be sent a letter (email) thanking them for their cooperation; indicating that there will be no sampling at this time; asking for them to notify the City if any changes to their process introduce new PFAS source(s).

MDEQ Wastewater PFAS Sampling Guidance released 6/1/18. However, it references the MDEQ General PFAS Sampling Guidance which is not posted (anywhere?) as of 6/7/18. Email sent to Tom Berdinski asking for the document.

Permit holders who fail to respond (at all) will be "assumed" to be a probable PFAS source (due to lack of info to the contrary). They will be notified (registered letter) of the City's intent to sample their location for PFAS.

Per Tom Berdinski (email 6/27/18): ...the "General PFAS Sampling Guidance" is still not available. However, the "Wastewater PFAS Sampling Guidance", although it refers to "General" guidance, contains what is needed.
