

DEQ-WATER RESOURCES DIVISION PRE-INSPECTION REPORT

Cadillac WWTP
NPDES CSI-Toxics
Inspection ID: 56545

FACILITY INFORMATION

Facility Name: Cadillac WWTP		Permit No.: MI0020257
Facility Address: 1121 Plett Road Cadillac, Michigan 49601	MAILING ADDRESS 200 N. CAKE ST. CADILLAC, MI 49601	Issued: 9/27/2013 Effective: 11/1/2013 Expires: 10/1/2017 App. Due: 4/4/2017
Facility Phone Number: (616) 775-2841		
Facility Contact: Jeffrey Dietlin, <i>Director of Utilities</i>		Reported Certified Operator: <i>Hamid Rahbarzadeh</i>
Phone Number: (231) 775-0181 Ext. 124		Phone Number: <i>231-775-2841</i>
Primary Industry:		
Nature of Business: municipal wastewater treatment plant		
Wastewater Treatment Processes:		
Municipal Classification Code: (A)		Major: Yes

*Hamid Requested verification of (A) in B
JRW - Based on documents.*

Permitted Outfalls

Mon. Point	Primary Outfall?	Authorized Volume	Wastewater Type	Receiving Water
001A	Yes	3.2 MGD	treated sanitary wastewater	Clam River

Other Permits

None

COMPLIANCE INFORMATION

Previous Inspections Conducted

56690 Biosolids Site Inspection 08/14/14 Retired/Completed

weather: sunny, 60s, light NW to SE wind
crew: Biotech Agronomics, Kim, tractor and Nuhn tank, surface application
soils: sandy loam
previous crop: hay

This is a follow-up inspection one month after surface application. Cadillac qualifies as a Class A EQ biosolids, which can be surface applied. Setbacks from wetlands were maintained. This is an isolated field back in the woods with no nearby residences. A mild earthy odor was still evident. Good regrowth of the previously cropped hay, especially alfalfa was observed. This was a good location and material for surface application. No complaints were received.

56513 Biosolids Site Inspection 07/21/14 Retired/Completed

weather: sunny, 80s, light SW to NE wind
crew: Biotech Agronomics, Kim, tractor and Nuhn tank
application rate: 13K gallons/acre
previous crop: grass hay

DEQ-WATER RESOURCES DIVISION PRE-INSPECTION REPORT

soils: loamy sand

This field was originally intended for surface application, however the farmer agreed to injection and replant the field. Adequate soil coverage at the time of the inspection. Biosolids have a "earthy" odor and is not obnoxious. No issues at the time of the inspection. Russ Eberhart and Don Popma were at the field observing the application.

56032 Biosolids Recon	06/05/14	Retired/Completed
-----------------------	----------	-------------------

Met with Hamid, superintendent, and discussed his biosolids storage situation. Biotech Agronomics expressed some frustration that the City does not have fields to go to. There is somewhat of a misunderstanding between Biotech and the city regarding the cost of finding new fields. Because Biotech charges to find fields, the city has taken on this responsibility. Hamid is working on a potential location; a hay field that the farmer wants biosolids injected prior to him plowing it up and replanting. This would avoid the need to surface apply biosolids on hay ground. I explained what is needed if they must resort to surface application.

56075 Biosolids Site Inspection	05/08/14	Retired/Completed
---------------------------------	----------	-------------------

weather: sunny, mid 50s, light east to west wind
 crew: Biotech Agronomics
 application rate 12K gallons/acre
 soils: sandy loam
 previous crop: wheat

This inspection entered late due to the field not being in NMS. Had to request a copy from contractor. Good land application of biosolids. Application occurred several days prior to the inspection. 800 foot setback from church water well flagged and observed. No issues at the time of the inspection.

55361 Biosolids Recon	11/14/13	Retired/Completed
-----------------------	----------	-------------------

Met with Hamid and staff and introduced myself as the biosolids inspector. Operations at the plant are going smoothly, no issues. Hamid accompanied me to the field and we conducted a joint field inspection of the land application process.

55363 Biosolids Site Inspection	11/14/13	Retired/Completed
---------------------------------	----------	-------------------

weather: cloudy, breezy upper 20s
 crew: Biotech Agronomics, tractor and Nuhn tank, Brian
 application rate: 15,900 gallons/acre
 previous crop: hay
 anticipated crop: corn
 soils: sandy loam

Conducted the field inspection with the Cadillac WWTP Superintendent HamidRahabnoohi. Biotech was achieving marginal soil coverage due to poor tool bar depth in soil. Advised the operator to pick up application speed to drop the application rate for better soil coverage.

50407 NPDES Compliance Evaluation Inspection (	09/30/13	Retired/Completed
--	----------	-------------------

I arrived at the Cadillac WWTP on September 30, 2013 to conduct the inspection but the plant operator was unavailable. We were able to reschedule and the inspection was finished on October 4, 2013.

The Plant operator, Mr. Hamid Rahbamoohi, took me on a tour of the facility beginning at the plant influent and progressing to the effluent. The plant appears to be operating well and integral structures seem to be adequately maintained. That being said, it is easy to see that the plant infrastructure is aging. The Septage receiving tank/EQ basin is in rough shape. The concrete near the tops of its walls is crumbling. Mr. Rahbamoohi said they are in the process of applying for funding to address aging infrastructure at the plant.

Rehab of roof completed in summer of 2014 Per Hamid

After the walkthrough we returned to Mr. Rahbamoohi's office and discussed their records and reporting system. He provided August's influent and effluent monitoring data. The plant employs a program that automatically fills in DMR's from a prepared spreadsheet.

We then went to the lab and discussed sampling and analysis. The plant also houses the municipal laboratory and Ms. Amy Vail handles some of the administrative responsibilities for the lab and conducts some of the sampling. It appears that sampling and analysis methods are acceptable. The lab monitors more metals in the wastewater than the permit requires and they monitor other locations in the plant to fine tune plant performance.

52343 Biosolids Site Inspection	10/03/12	Retired/Completed
---------------------------------	----------	-------------------

49014 Reconnaissance Inspection	07/06/12	Retired/Completed
---------------------------------	----------	-------------------

DEQ-WATER RESOURCES DIVISION PRE-INSPECTION REPORT

John Draminski and I took a tour of the facility from the influent to the effluent. Also took a brief walk through of their lab. Everything was well maintained and facility seemed generally clean and well maintained. Recieving waters, Clam River, seem to be clean at outfall.

49192 Biosolids Recon 10/12/11 Retired/Completed

Visited plant during land application. Superintendent not available. Discussed land application program req with operator. No issues.

46062 Reconnaissance Inspection 06/15/11 Retired/Completed

Met with Hamid Rahbarnoohi, after introductions he lead me on a tour starting at grit removal and ending at the effluent outfall. No significant issues present, no odor issues or citizen complaints.

46571 Biosolids Recon 05/18/11 Retired/Completed

46572 Biosolids Site Inspection 05/18/11 Retired/Completed

Inspected site just after contractor completed application. Applied 11,370 gal /acre. into corn stuble. Good injection. No odors. 6% slope. No issues.

43653 CSI-Conventionals Only 02/03/11 Retired/Completed

I was on site with Chris Little for sampling on the 24th and back on February 3rd with our student intern (Scott Schmidt) to conduct a follow-up inspection. This inspection involved a the plant operator (Doug Langworthy) walking us from the influent location at the screw pump all the way through to the disinfection room. The screw pump is where a majority of the wastewater comes in. There is an additional line that does not come in at this location. The equilization tank is where the facility accepts their hauled waste which is really only landfill leachate from the County Landfill. It doesn't appear to have screens or flow meter in this area. Near the grit chamber were two samplers for influent and raw sampling. We were told these were due to be replaced. It also appeared to have more foul because the screens were not closer to the influent at the screw pump to remove some of the rags before hand. The primary clarifiers - aeration tanks and secondary clarifiers looked and smelled normal. The rotating biological contactors appeared to be working properly, no odors, lopping. The aqua disk area had no odors and the ultra violet disinfection was working. We conducted the interview portion of the inspection with the plant superintendent, Hamid Rahbarnoohi and laboratory manager Amy Vail. The only recommendation at this time is for the facility to conduct flow proportioned sampling. They will have the ability to do this in the influent when they change out the equipment. They are able to do this with the effluent sampling equipment they own. The other would be to have flow metering and barscreen at the influent.

46192 Biosolids Site Inspection 10/13/10 Retired/Completed

Inspected site during land application. Investigated potential issue with vicinity to Type I or Type III well on other side of highway. Ben with Synagro determined location of well on adjoining property to maintain appropriate iso distance. No other issues identified.

38964 Industrial Pretreatment Prog Recon 11/19/09 Retired/Completed

Conducted IPP Recon inspection on November 19, 2009. Primary issue was elevated zinc in biosolids. Zinc was found during a September 2009 Point Source Survey. Plant Superintenden identified Cadillac Castings Inc. as the source of zinc. Cadillac needs to submit a compliance report by Jan. 15, 2010 per CSI inspection letter. City had determined source of zinc by manhole sampling.
