Hi Don!

No worries whatsoever. I appreciate you taking the time to contact Cadillac in regards to their SW, it's been a big help. I'd like to aim to have the NEC approved prior to moving Cadillac to Public Notice.

Bradley P.

Hi Bradley,

O.K. Thanks for the feedback, it helps. I learn by going through the process and going through the Cadillac review with you has been very helpful. I obviously need to look at the NPDES applications more closely and will do that. Questions 2a. and 3a. of the district comments form for Cadillac should have been yes.

Question 2a. on the district comment form is a little bit of a problem for me at this point, but I think I will be able to make it work as I interact with permit staff more. I am not sure the DEQ has enough staff to put one set of eyes on what is important, let alone two sets of eyes, but I am not interested in changing the SOP. In the future, I will talk to individual permit staff about question 2a. before working on the district comments form. Everyone is different, and I do a lot more than NPDES work, I am not sure I will ever have time to check everything in NPDES applications. I am confident permit staff can help me prioritize what to look at though, and I can spend more time on the applications than I did for Cadillac.

I talked to the operator at the Cadillac WWTP about stormwater. The plant does convey stormwater to surface water through a storm sewer system. However, the plant does not expose the stormwater to significant materials (per the operator and my recollection, faulty as that has been). I am going to ask the operator to submit the no exposure or NEC form in MiWaters, will inspect the facility again, and process the NEC form per the SOP. I don't think the NPDES permit needs to include the SWPPP verbiage. If I need to make sure the NEC is processed by a certain date to keep the SWPPP verbiage out of the NPDES please let me know.

Thanks again for the phone calls/emails and for catching what I missed.

Subject: District Application Compliance Comments

Hey Don,

So, I did some digging and unfortunately there is no direct guidance related to how district should be reviewing the applications; however, we'd prefer if the applications were reviewed with more detail. The thought is that it would be much better to catch something at the beginning of the process, rather than during public notice. Here are a few examples that may help:

1. If you notice anything within their narrative description/flow diagram that is missing, or you believe would help the process please let permit section know.
2. If anything seems odd within the applicants Biosolids section please consult the district biosolid staff (and so on with IPP/SW).
3. Review the provided outfall coordinates to make sure that they have been correctly entered into MiWaters.
4. Making sure all of the contact seem to be accurate

Those are just some that other permit writers mentioned to me. I apologize if this is still too vague of an answer to your question. If you'd like more information I'd recommend speaking with Chris Veldkamp, as she helped draft the form with permits section.

If you have any additional questions feel free to let me know!
